

Living in a state like Kansas, which is very isolated and does not afford a person a lot of broadcast radio stations to select from, XM Radio provides an easy and logical solution to this problem. Not only does it give me a much wider selection and variety of radio choices from which I can select, it provides a selection of programming that would not normally be offered in Kansas. This selection of programming is something that I, as a subscriber, pay for and the National Association of Broadcasters should NOT be allowed to dictate what type of programming should be offered by satellite radio. I respectfully urge the FCC to REJECT the NAB's petition 04-160 and to support XM radio's ability to provide programming that I want and deserve to receive, especially when these types of programming are not available if it weren't for XM Radio.
